4 Practical Exercises with Solutions	23

1 Chapter 1: Introduction to Styles

1.1 What is a Style?

Definition

A **style** is a collection of formats which is used to change the appearance of specific text, pages, frames and other elements in a document. A style helps to improve consistency in the document.

Example

Real-World Example - School Project:

Imagine you're creating a 20-page science project report. Instead of formatting each heading manually:

- **Without Styles:** Select Chapter 1 title → Set font to Arial 16pt Bold → Center align → Set color blue. Repeat for Chapter 2, Chapter 3... (20 times!)
- **With Styles:** Create "ChapterTitle" style once → Apply to all chapter titles instantly → Want to change? Modify the style → All 20 titles update automatically!

Another Example - Business Letter:

[Apply "CompanyHeader" style]

ABC Corporation
123 Business Street
Delhi - 110001

[Apply "Date" style]

December 25, 2025

[Apply "Recipient" style]

To The Manager
XYZ Solutions

[Apply "Subject" style]

Subject: Business Proposal

[Apply "BodyText" style]

Dear Sir/Madam,
This letter is regarding...

1.2 Advantages of Styles

- **Consistency:** All similar elements look the same

Example

Example: In a 50-page book, all chapter titles have exactly the same font, size, color, and spacing because they use the same style.

- **Time Saving:** Apply multiple formats at once

Example

Example: Instead of manually setting font to Arial 12pt, line spacing 1.5, indentation 0.5" for every paragraph, just apply "BodyText" style.

- **Easy Modifications:** Change all instances at once

Example

Example: Teacher says "Make all headings red instead of blue." With styles: Change the Heading style color → ALL headings become red instantly!

- **Accessibility:** Helps visually impaired readers

Example

Example: Screen readers can identify "This is a heading" vs "This is normal text" when proper styles are used.

1.3 Types of Styles in LibreOffice Writer

LibreOffice Writer provides six different types of styles:

Example

Complete Document Example Using All Style Types:

1. **Page Style:** "ReportPage" - A4 size, 1" margins, page numbers in footer

2. Paragraph Styles:

- "Title" - Centered, 20pt, Bold
- "Heading1" - Left, 16pt, Blue
- "BodyText" - Justified, 12pt, 1.5 line spacing
- "Quote" - Italic, indented left/right

3. Character Styles:

- "Keyword" - Bold + Red
- "Code" - Monospace font + Gray background

4. **Frame Style:** "PhotoFrame" - Shadow border, centered

5. **List Style:** "Procedure" - Numbered with indentation

6. **Table Style:** "DataTable" - Alternating row colors

1.4 How to Apply Styles - Multiple Methods

Steps

Method 1: Using Styles and Formatting Window (F11)

- Step 1:** Select the text you want to format
- Step 2:** Press F11 function key OR go to **Format → Styles and Formatting**
- Step 3:** The Styles window opens showing different style categories
- Step 4:** Click on desired category icon (Paragraph, Character, etc.)
- Step 5:** Double-click on the style you want to apply

Example

Practical Scenario - Formatting a Research Paper:

1. Select the paper title → Press F11 → Paragraph Styles → Double-click "Title"
2. Select author names → Character Styles → Double-click "Author"
3. Select abstract text → Paragraph Styles → Double-click "Abstract"
4. Select section headings → Paragraph Styles → Double-click "Heading 1"
5. Select references → List Styles → Double-click "Bibliography"

Steps

Method 2: Fill Format Mode (For Quick Formatting)

- Step 1:** Open Styles window (F11)
- Step 2:** Select text with desired formatting
- Step 3:** Click the **Fill Format** button (paint bucket icon)
- Step 4:** Notice cursor changes to paint bucket
- Step 5:** Click on other text sections to apply same formatting
- Step 6:** Press ESC key to exit Fill Format mode

Example

Fill Format Example - Formatting Multiple Headings:

You have 10 section headings in your document:

1. Introduction [Manually formatted: Arial 14pt Bold Blue]
2. Literature Review [Not formatted yet]
3. Methodology [Not formatted yet]
- ... etc

Instead of formatting each separately:

1. Select "1. Introduction" (already formatted)
2. Click Fill Format button
3. Click on "2. Literature Review" → Instantly becomes Arial 14pt Bold Blue
4. Click on "3. Methodology" → Same formatting applied
5. Continue for all headings
6. Press ESC when done

Note

Important Keyboard Shortcuts:

- **F11**: Open Styles and Formatting window
- **Ctrl+F11**: Create new style
- **Ctrl+0**: Apply Normal paragraph style
- **Ctrl+1**: Apply Heading 1 style
- **Ctrl+2**: Apply Heading 2 style
- **Ctrl+Shift+C**: Copy formatting
- **Ctrl+Shift+V**: Paste formatting

1.5 Creating New Custom Styles

Steps

Method 1: Creating Style from Selection

Step 1: Format text exactly as you want the style to look

Example

Example: Format a paragraph as:

- Font: Times New Roman 12pt
- Color: Dark Green
- Alignment: Justified
- Line spacing: 1.5
- Indentation: First line 0.5"

Step 2: Select the formatted text

Step 3: Open Styles window (F11)

Step 4: Click **New Style from Selection** icon

Step 5: Enter descriptive name (e.g., "MyBodyText")

Step 6: Click OK

Step 7: New style now appears in Styles list

Steps

Method 2: Creating Style using Drag and Drop

Step 1: Format text as desired

Step 2: Select the formatted text

Step 3: Drag and drop it into the Styles window

Step 4: Enter name for new style

Step 5: Click OK

Example**Creating Custom Styles for Different Documents:****1. For School Assignment:**

- "Question" - Bold, 14pt, Blue
- "Answer" - Normal, 12pt, Black
- "ImportantPoint" - Bold + Underline + Yellow highlight
- "DiagramCaption" - Italic + Centered + Smaller font

2. For Business Report:

- "ExecutiveSummary" - Special paragraph with border
- "FinancialData" - Table style with currency formatting
- "Recommendation" - Red border + shaded background
- "Confidential" - Watermark style

3. For Personal Letter:

- "Salutation" - Bold + Larger font
- "Closing" - Right-aligned + Signature space
- "PS" - Italic + Indented

1.6 Updating and Loading Styles

Steps**Updating an Existing Style:**

Step 1: Apply the style to some text

Step 2: Modify the text formatting manually

Example

Example: You have "Heading2" style that's 14pt Blue. You want it to be 14pt Green instead.

1. Select text with "Heading2" style applied 2. Change color from Blue to Green

Step 3: Right-click on the modified text

Step 4: Select **Styles** → **Update Style**

Step 5: OR: In Styles window, right-click style name → **Modify**

Steps**Loading Styles from Another Document/Template:**

Step 1: Open the document where you want to add styles

Step 2: Go to **Format → Styles and Formatting**

Step 3: Click the **Styles** menu button (top-right of window)

Step 4: Select **Load Styles**

Step 5: Browse and select the template/document with desired styles

Step 6: Check options: Overwrite, Text, Numbers, etc.

Step 7: Click OK

Example**Practical Use Case - School Projects:**

Your teacher provides a "ProjectTemplate.ott" with:

- Correct margins and page layout
- Predefined heading styles
- Proper bibliography style able format for data

Instead of creating everything from scratch: 1. Start new document 2. Load styles from ProjectTemplate.ott 3. All styles are now available 4. Just apply and focus on content

2 Chapter 2: Working with Images

2.1 Inserting Images - Multiple Methods

LibreOffice Writer allows inserting images through various methods:

Example**Practical Scenarios for Each Method:****Scenario 1: Creating School Project**

- Use **Image Dialog Box** for project cover photo
- Use **Drag and Drop** for quick diagram insertion
- Use **Copy-Paste** for web research images

Scenario 2: Company Monthly Report

- Use **Linked Image** for company logo (used in all reports)
- Use **Image Dialog Box** for charts and graphs
- Use **Copy-Paste** for screenshot of software

Scenario 3: Personal Photo Album Document

- Use **Drag and Drop** for multiple photos quickly
- Use **Image Dialog Box** to select best quality images

2.2 Image Toolbar and Modifications

When an image is selected, the Image toolbar appears with various options:

Example**Complete Image Editing Example - School Magazine:****1. Cover Photo:**

- Apply "Sharpen" filter for clarity
- Adjust brightness/contrast
- Add slight transparency for text overlay

2. Student Photos:

- Convert to Grayscale for uniform look
- Apply "Smooth" filter for soft appearance
- Crop to focus on faces

3. Event Photos:

- Apply "Aging" filter for old event photos
- Rotate if needed
- Add border using Frame Style

4. Background Images:

- Set to Watermark mode
- High transparency
- Apply "Posterise" for artistic effect

2.3 Cropping Images

Steps**How to Crop an Image:**

Step 1: Select the image

Step 2: Right-click → **Picture** → **Crop**

Step 3: OR: Click Crop button on Image toolbar

Step 4: Drag the crop handles to select area

Step 5: Double-click inside crop area to apply

Example

Practical Cropping Examples:

Example 1: Profile Picture for ID Card

- Original: Full body photo
- Crop to: Face and shoulders only
- Settings: Keep Scale (maintain proportions)
- Result: Perfect square for ID card

Example 2: Screenshot of Software

- Original: Full screen with taskbar, desktop icons
- Crop to: Only the application window
- Settings: Keep Image Size (don't stretch)
- Result: Clean professional screenshot

Example 3: Group Photo

- Original: 10 people in photo
- Need: Only 3 specific people
- Crop to: Area containing those 3 people
- Settings: Keep Scale
- Result: Focused image

Definition

Difference: Keep Scale vs Keep Image Size

Keep Scale: Maintains original aspect ratio. If you crop 50% of width, image becomes 50% smaller.

Keep Image Size: Maintains image dimensions on page. If you crop 50% of width, image stretches to fill same space (may look distorted).

Example

Visual Example of Keep Scale vs Keep Image Size:

Original Image: 4×4 inches square photo

After cropping 2 inches from left:

Keep Scale	Keep Image Size
Image becomes 2×2 inches (Half the original size)	Image remains 4×4 inches (Stretched to fit)
Natural proportions maintained	May look distorted
Good for maintaining quality	Good for maintaining layout

2.4 Drawing Objects

LibreOffice Writer includes drawing tools for creating shapes, flowcharts, and diagrams.

Steps

Creating a Flowchart:

Step 1: View → Toolbars → Drawing (to show Drawing toolbar)

Step 2: Select **Rectangle** tool for process steps

Step 3: Draw first rectangle, type "Start"

Step 4: Select **Arrow** tool to connect shapes

Step 5: Add **Diamond** shape for decisions

Step 6: Add **Oval** for start/end points

Step 7: Group all shapes when complete

Example**Practical Drawing Examples:****1. Organizational Chart:**

- Rectangles for positions
- Lines for reporting structure
- Different colors for departments
- Text inside shapes

2. Science Diagram:

- Circles for atoms
- Lines for bonds
- Arrows for reactions
- Labels with callouts

3. Floor Plan:

- Rectangles for rooms
- Lines for walls
- Arrows for doors
- Text for room names

4. Timeline:

- Horizontal line for timeline
- Vertical markers for events
- Text boxes for descriptions
- Different shapes for event types

2.5 Positioning Images in Text

Four main settings control image positioning:

Example**Complete Document Layout Example:****Page 1: Cover Page**

- Background image: Anchored to page, Watermark mode, Through wrapping
- Title: Centered, Bring to Front
- Logo: Top-right, Anchored to page

Page 2: Introduction

- Author photo: Left aligned, Square wrapping
- Text: Flows around photo
- Decorative border: Behind text

Page 3: Technical Content

- Diagrams: Centered, No wrapping (in separate paragraphs)
- Captions: Below diagrams, Anchored to paragraph
- Side notes: Right aligned, Tight wrapping

Page 4: Data

- Charts: Multiple charts arranged using Alignment tools
- Tables: Text wrapping set to Optimal
- Footnotes: Bottom of page

3 Chapter 3: Advanced Features

3.1 Table of Contents (ToC)

Definition

A **Table of Contents (ToC)** is an automatically generated list of headings in your document with their page numbers. It helps readers navigate long documents.

Steps

Creating Automatic Table of Contents:

Step 1: Apply proper heading styles throughout document:

- Main chapters: **Heading 1**
- Sections: **Heading 2**
- Sub-sections: **Heading 3**

Step 2: Place cursor where ToC should appear (usually beginning)

Step 3: Insert → Table of Contents and Index → Table of Contents, Index or Bibliography

Step 4: Configure settings:

- **Title:** "Table of Contents" or "Contents"
- **Protect against manual changes:** Checked
- **Outline:** 1-10 (levels to include)
- **Styles:** Use Outline if you used Heading styles

Step 5: Click OK

Step 6: To update: Right-click on ToC → Update Index

Example

Sample Document Structure with ToC:

TABLE OF CONTENTS

1. INTRODUCTION.....	1
1.1 Background.....	2
1.2 Problem Statement.....	3
1.3 Objectives.....	4
1.3.1 Primary Objective.....	4
1.3.2 Secondary Objectives.....	5
2. LITERATURE REVIEW.....	6
2.1 Historical Perspective.....	7
2.2 Current Research.....	8
3. METHODOLOGY.....	10
3.1 Research Design.....	11
3.2 Data Collection.....	12
3.3 Data Analysis.....	13
4. RESULTS AND DISCUSSION.....	15
4.1 Findings.....	16
4.2 Analysis.....	17
5. CONCLUSION AND RECOMMENDATIONS....	19
5.1 Summary of Findings.....	20
5.2 Recommendations for Future Research.	21
REFERENCES.....	23
APPENDICES.....	25

How this was created:

- "1. INTRODUCTION" → Heading 1 style
- "1.1 Background" → Heading 2 style
- "1.3.1 Primary Objective" → Heading 3 style
- ToC automatically picks up these styles
- Page numbers added automatically
- Dots (.....) added as leaders

Note**ToC Structure Elements:**

The ToC structure line contains buttons representing elements:

- **E#**: Chapter number (1, 2, 3...)
- **E**: Entry text (chapter title)
- **T**: Tab stop (space between text and page number)
- **#**: Page number
- **LS**: Start of hyperlink (clickable ToC)
- **LE**: End of hyperlink

Example Structure: E# E T #

This creates: **1 Introduction.....1**

3.2 Templates

Definition

A **template** is a pre-designed document format that serves as a starting point for new documents. Templates save time and ensure consistency across similar documents.

Steps

Creating a School Assignment Template:

Step 1: Create new document

Step 2: Set up page style:

- Margins: Top 1", Bottom 1", Left 1.5", Right 1"
- Header: School name, logo
- Footer: Page numbers, date

Step 3: Create styles:

- "AssignmentTitle" - Centered, 16pt, Bold
- "StudentInfo" - Left aligned, 12pt
- "Question" - Numbered, Bold, 12pt
- "Answer" - Justified, 12pt, 1.5 spacing
- "Marks" - Right aligned, Italic

Step 4: Add placeholder text:

SCHOOL NAME
ASSIGNMENT

Name: _____
Class: _____
Roll No: _____
Date: _____

Subject: _____

1. [Type question here]
[Answer space]

[Marks: __/__]

Step 5: File → Templates → Save as Template

Step 6: Name: "SchoolAssignment"

Step 7: Category: "Education"

Step 8: Click Save

Example**Different Types of Templates with Examples:****1. Business Templates:**

- **Invoice Template:** Company header, item table, totals section
- **Letterhead:** Logo, address, contact information
- **Memo:** To/From/Date/Subject fields
- **Report:** Executive summary, sections, conclusions

2. Education Templates:

- **Lesson Plan:** Objectives, materials, procedure, assessment
- **Worksheet:** Questions with answer spaces
- **Certificate:** Border, fancy fonts, signature lines
- **Progress Report:** Grades table, comments section

3. Personal Templates:

- **Resume/CV:** Sections for education, experience, skills
- **Party Invitation:** Decorative border, RSVP information
- **Recipe Card:** Ingredients, method, cooking time
- **Travel Itinerary:** Date/time/activity columns

4. Professional Templates:

- **Research Paper:** Abstract, sections, references
- **Project Proposal:** Problem statement, methodology, budget
- **Meeting Minutes:** Attendees, agenda, action items
- **Press Release:** FOR IMMEDIATE RELEASE header, contact info

Steps**Using Online Templates:**

Step 1: File → New → Templates

Step 2: In Templates dialog, click "Get more templates online"

Step 3: Browser opens to LibreOffice template website

Step 4: Browse categories or search

Step 5: Download desired template

Step 6: It automatically appears in your templates

Step 7: Double-click to use

3.3 Track Changes Feature

Definition

Track Changes is a feature that records all modifications made to a document, including insertions, deletions, and formatting changes. Each change is marked with the author's name and timestamp, making collaborative editing easy.

Steps**Using Track Changes for Group Project:**

Step 1: Open the group project document

Step 2: Turn on Track Changes:

- Edit → Track Changes → Record Changes
- OR: Click red dot on Track Changes toolbar

Step 3: Each student makes their contributions:

- Additions appear in color (each author different color)
- Deletions show as strikethrough
- Formatting changes are noted

Step 4: Add comments for explanations:

- Select text
- Insert → Comment
- OR: Click comment icon on toolbar
- Type your note

Step 5: Review changes:

- Use Previous/Next buttons to navigate changes
- Accept good changes
- Reject unwanted changes

Step 6: Finalize document:

- Accept All or Reject All as needed
- Turn off Track Changes
- Save final version

Example

Real-World Track Changes Scenarios:

Scenario 1: Teacher Correcting Assignment

Original student text:

The internet is a global network of computers.
It was invented in 1990.

After teacher's track changes:

The internet is a global network of computers.
It was [developed]invented in [the 1960s, with the
modern internet emerging in]1990[.]

[Comment: Good definition, but dates need correction.
The ARPANET began in 1969. The World Wide Web
was invented in 1990, not the internet itself.]

Scenario 2: Team Writing Business Proposal

- **Author 1 (Marketing):** Writes initial draft (text in blue)
- **Author 2 (Finance):** Adds budget section (text in green)
- **Author 3 (Legal):** Reviews and adds disclaimers (text in red)
- **Manager:** Reviews all changes, accepts/rejects, adds final comments

Scenario 3: Editing a Research Paper

Change Type	How it Appears
Text addition	New text in color
Text deletion	Deleted text with strikethrough
Formatting change	[Formatting: Bold applied]
Comment	[Comment: This needs citation]
Move text	Text moved from here → to here

Practical Tips

Track Changes Best Practices:

1. **Use Different Colors:** Each team member gets unique color
2. **Add Comments:** Explain WHY you made changes
3. **Review Regularly:** Don't let changes pile up
4. **Use "Protect Record":** Prevent accidental turning off
5. **Save Versions:** Save before major accept/reject sessions
6. **Communicate:** Discuss major changes outside document
7. **Final Review:** One person does final accept/reject pass

4 Practical Exercises with Solutions

Exercise 1: Create Complete School Project

Task: Create a 5-page science project on "Global Warming"

1. Create and apply these styles:
 - ProjectTitle (18pt, Centered, Bold, Blue)
 - SectionHeading (14pt, Bold, Green, Underline)
 - BodyText (12pt, Justified, 1.5 spacing)
 - Caption (10pt, Italic, Centered)
 - Quote (Italic, Indented left/right, Gray background)
2. Insert and format these images:
 - Cover photo with Watermark effect
 - 2 charts with borders and captions
 - 1 diagram with arrows and labels
 - Group photo with rounded corners
3. Create automatic Table of Contents
4. Use Track Changes to simulate teacher corrections
5. Save as template for future projects

Exercise 2: Business Document Suite

Task: Create templates for a small business

1. Letterhead Template:

- Company logo at top
- Address and contact information
- Horizontal line separator
- Footer with page numbers

2. Invoice Template:

- Company header
- Customer information section
- Itemized table with columns: Item, Quantity, Price, Total
- Automatic calculations (if using spreadsheet)
- Terms and conditions section

3. Business Proposal Template:

- Cover page
- Executive summary style
- Section numbering (1.0, 1.1, 1.1.1)
- Budget table
- Signature page

Exercise 3: Collaborative Editing Project

Task: Simulate team document editing

1. Create document about "Benefits of Exercise"
2. Student A: Write introduction (2 paragraphs)
 - Turn on Track Changes
 - Write content
 - Apply proper styles
3. Student B: Add health benefits section
 - Add 3 benefits with explanations
 - Insert relevant images
 - Add comments asking for clarification
4. Student C: Add exercise recommendations
 - Create table with exercise types

- Add safety precautions
- Correct any errors found

5. Teacher: Final review

- Accept appropriate changes
- Reject incorrect information
- Add final comments
- Generate final version

Exam Preparation Guide

Important Questions with Examples

1. **Q: What are styles and why are they important?**

A: Styles are predefined formatting sets. Important because:

Example

Example: In a 100-page company manual:

- Without styles: Change all headings manually (takes hours)
- With styles: Modify "Heading1" style → All 100 headings update instantly

2. **Q: Explain the difference between "Keep Scale" and "Keep Image Size" when cropping.**

A:

Example

Example - School ID Photo:

- Original: 4×6 inch photo
- Crop to remove background
- **Keep Scale:** Photo becomes 3×4.5 inches (proportions kept)
- **Keep Image Size:** Remains 4×6 inches (stretched, may look fat/thin)

Use Keep Scale for photos, Keep Image Size for maintaining layout.

3. **Q: How does Track Changes help in collaborative work?**

A:

Example

Example - Group Project: 3 students working on same document:

- Student 1 (Blue text): Adds research data
- Student 2 (Green text): Corrects spelling errors
- Student 3 (Red text): Adds formatting
- Teacher: Reviews all colors, accepts/rejects, sees who made each change

Without Track Changes: Confusion about who changed what.

4. **Q: What is the use of templates? Give examples.**

A: Templates save time and ensure consistency.

Example

Examples:

- **School:** Assignment template ensures all submissions same format
- **Office:** Invoice template ensures all invoices look professional
- **Hospital:** Patient report template has all required sections
- **Bank:** Loan application template collects all necessary information

Keyboard Shortcuts Cheat Sheet

Common Errors and Solutions

Summary

Digital Documentation skills are essential for creating professional, consistent, and collaborative documents.

Master Styles for efficiency, Images for visual appeal, and Advanced Features for professional results.

Remember: Practice regularly in LibreOffice Writer to develop practical skills.

Based on CBSE Information Technology (402) Class 10 Curriculum

Includes all original content from CBSE textbook plus additional practical examples

Style Type	Elements Controlled	Practical Examples
Page Style	Background, borders, header/footer, page size, margins	• Create letterhead with logo in header • Different margins for different chapters • Landscape page for wide tables
Paragraph Style	Line spacing, tab stops, borders, alignment	• Indented paragraphs for quotes • Centered text for titles • Double spacing for rough drafts
Character Style	Text color, size, bold/italic, highlighting	• Red text for important warnings • Bold blue for technical terms • Highlighted text for key points
Frame Style	Size, position, borders, background	• Photo frames with shadows • Text boxes with colored backgrounds • Watermarks behind text
List Style	Numbering, bullets, indentation	• Nested lists (1., 1.1, 1.1.1) • Custom bullet points (instead of ●) • Numbered procedures
Table Style	Borders, shading, text alignment	• Zebra-striped tables • Rounded corner tables • Professional report tables

Method	Procedure	When to Use
Image Dialog Box	Insert → Image → Select file → Open	• Precise image selection • When you need to choose from multiple files • Professional documents
Drag and Drop	Drag from folder → Drop in document	• Quick insertion • When you can see both folder and document • Casual documents
Copy-Paste	Copy image → Paste in document	• Copying from web pages • From other applications • Quick screenshots
Linked Image	Insert → Image → Check "Link" option	• Same image in multiple documents • Large images to reduce file size • Images that might be updated

Tool	Practical Examples
Image Filter	• Invert: Convert day photo to night effect • Smooth: Soften harsh portrait photos • Sharpen: Make blurry text in screenshot clear • Remove Noise: Clean grainy old photos • Solarisation: Artistic effect for creative projects • Aging: Make new photo look old for history project • Posterise: Create pop-art style images • Charcoal Sketch: Convert photo to drawing for art project • Relief: Create 3D effect for diagrams • Mosaic: Pixelate sensitive information
Image Mode	• Black & White: Old newspaper style photos • Grayscale: Professional look for reports • Watermark: Background images behind text
Flip/Rotate	• Horizontal Flip: Correct mirror image photos • Vertical Flip: Create water reflection effect • Rotation: Straighten tilted photos
Transparency	• Make logo semi-transparent for watermark • Fade image for background effect • Blend multiple images
Color Adjustment	• Brightness: Fix dark/overexposed photos • Contrast: Make details more visible • Gamma: Adjust mid-tone brightness

Setting	What it Does	Practical Examples
Arrangement	Controls which objects are in front/behind	• Send watermark behind text • Bring callout box to front • Layer multiple images
Anchoring	Fixes image position relative to something	• Anchor logo to page (stays on every page) • Anchor diagram to paragraph (moves with text) • Anchor caption to image
Alignment	Positions image horizontally/vertically	• Align photos left in gallery • Center important images • Right-align signature
Text Wrapping	Controls how text flows around image	• No wrapping: Image in line with text • Square wrapping: Text forms square around image • Tight wrapping: Text contours around image shape • Through: Text flows through image (for watermarks)

Shortcut	Purpose
F11	Open Styles and Formatting window
Ctrl+Shift+N	Open Template Manager
Ctrl+Shift+F	Activate Fill Format mode
Ctrl+F11	Create new style
Ctrl+0	Apply Normal paragraph style
Ctrl+1	Apply Heading 1 style
Ctrl+2	Apply Heading 2 style
Ctrl+3	Apply Heading 3 style
Ctrl+Shift+C	Copy formatting only
Ctrl+Shift+V	Paste formatting only
Ctrl+Enter	Insert page break
Ctrl+Shift+Enter	Insert column break
Alt+I, P	Insert picture
Alt+V, Z	Zoom dialog
Shift+F3	Change case (UPPER/lower/Title)

Problem	Solution
Table of Contents not updating	Right-click ToC → Update Index → Update entire table
Style changes not applying everywhere	Check if style is based on another style
Images moving unexpectedly	Check anchoring (Page vs Paragraph vs Character)
Track Changes colors not showing	Each user must have different username in Tools → Options
Templates not appearing in list	Save in correct folder: User/templates or Program/templates
Text wrapping not working properly	Try different wrapping options (Square, Tight, Through)
Cropping distorting image	Use "Keep Scale" instead of "Keep Image Size"
